## GBRM Autocentrante per Ruote Moto

### GBRM Motorcycle Wheel Adapter

Generalmente le ruote da equilibrare vengono fissate all'albero delle macchine equilibratrici in corrispondenza del loro mozzo, o del foro centrale del cerchio su cui è montato lo pneumatico. Ciò garantisce sia il centraggio delle ruote sull'albero, sia il bloccaggio torsionale necessario affinché l'albero trascini in rotazione la ruota. Il suddetto sistema di fissaggio non è tuttavia applicabile alle ruote da motociclo, in quanto presentano un mozzo dotato di cuscinetti di rotolamento. Esso è quindi adatto per il centraggio della ruota, ma, non consente il trascinarsi della ruota in rotazione. Quindi si è studiato un'attrezzatura da fissare direttamente alla macchina equilibratrice e in grado di bloccare la ruota sull'esterno dello pneumatico, trasferendogli di conseguenza il movimento rotatorio della macchina stessa.

While vehicles wheels use to be fastened to balancers shafts by the their central hub or by the central hole of the rim, motorcycles wheels cannot, because of the rolls bearings which leave the rim rotate on the shaft axle, not allowing the balancer to control the wheel during rotations. Femas solution is the GBRM Motorcycle Wheel Adapter which trues up the wheel on the same axle of the wheel-balancer shaft, clamping the tyre directly to provide a tight and precise wheel locking during balancing rotations.

# GA Gruppi albero per GBRM

## GA Shafts assembly for GBRM

Tutti i gruppi albero si differenziano tra di loro per il Ø dello stesso, per la sua forma e per una specifica composizione di distanziali, coni e ghiera.

All the shafts assemblies are different in the shaft diameter, its shape and the relevant configuration of spacers, cones and ring nuts.

## Per equilibratrice standard - For standard static balancer

Il kit ad anelli DUCATI - BMW, abbinato al corpo flangia ed al cono di centraggio, offre una serie completa di adattatori per assicurare correttamente i cerchi ruote DUCATI e BMW.

La misura del diametro di centraggio riportata su ogni anello permette di individuare quello più adatto alla singola ruota DUCATI o BMW. Inoltre sia sulla flangia che sul cono di centraggio sono presenti dei cuscinetti a sfera per una perfetta rotazione della ruota sull'albero dell'equilibratrice.

The DUCATI - BMW rings kit, coupled with a flange and a centring cone, provides a complete adaptors set to fix all DUCATI and BMW motorcycle wheels onto the wheel-balancing machine.

The diameter value reported onto each ring grants a quick identification of the necessary adaptor for each DUCATI or BMW rim.
